Houston, Texas - March 19, 2009 SpectraCell Laboratories, Inc., headquartered in Houston, Texas, was founded in 1993. SpectraCell originally offered clinicians one laboratory service... the “Functional Intracellular Analysis” (FIA), a panel comprised of a large number of tests to assess vitamin and mineral status. The company recently discontinued the “Functional Intracellular Analysis” (FIA), and is now a diversified clinical laboratory offering a broad spectrum of advanced laboratory testing related to nutritional status, cardiovascular disease, and immune function. SpectraCell has expanded its services to include a comprehensive menu of advanced tests and selected panels including:

- Tests to detect deficiencies (in white cells) of vitamins, anti-oxidants, minerals and amino acids, utilizing methodology adapted from standard lymphocyte transformation technology
- Tests (in serum) for iron, TIBC, ferritin, protein, albumin, and pre-albumin.
- Measurements of lipoprotein particles and sub-fractions, utilizing a patented ultra-centrifugation method.
- Tests (in serum) for C-reactive protein, insulin, apolipoproteins, homocysteine, and other markers associated with cardiovascular disease.

#####

SpectraCell is a CLIA-certified laboratory and a Medicare provider. The company recently expanded its facilities to encompass 30,000 square feet of laboratory and administrative space, and employs 132 people.
